FOR IMMEDIATE RELEASE

Energy Jobline and Renewables in Africa (RiA) release 'The 2019 Global Energy Talent Index' Survey

LONDON, UK, August 10 - Last week marked the release of the third annual [Global Energy Talent Index \(GETI\) survey](#). The survey is an industry-leading workforce project backed by **Renewables in Africa (RiA)**, the Authentic Clean Energy Engineering Consultancy and Media Platform and Energy Jobline, the world's largest energy job site.

The survey results will explore the opinions of energy professionals across the Power, Oil and Gas, Renewables, Nuclear and Petrochemicals sectors. This year's theme will look at the impact of skills shortages. The results will highlight the professional view on how each market should adapt.

Tony Tiyou, Chief Executive Officer and Editor-in Chief at RiA declared: "We are very proud to participate in the 3rd annual GETI survey opening. Building a strong Renewable Energy Sector in Africa and across the World require us to precisely understand where the skills shortages in the industry are. From the feedback gathered we will be sharing the insightful data and trends observed. Like past editions, the 2019 report will be used by blue chip companies in the energy industry and will highlight global macroeconomic employment trends."

"The GETI report investigates what matters to professionals and their predictions for the future."

Renewables in Africa and Energy Jobline are incentivising the survey and you surely do not want to pass your chance. Survey respondents have the opportunity to **win a free Apple Watch or pair of BOSE Headphones**.

- **Themes to be addressed in GETI 2019**

This year's GETI report will uncover trends in demographics, pay and sector mobility. The resulting index will be a "deep dive" into the varied wants and needs of workers in each energy sector. Building on findings from previous years, the survey will look closely at the issue of skills shortages within each sector and elicit the professional opinion of where these shortages will occur and what can be done.

The survey results will be reported in the Global Energy Talent Index in January 2019. Previous reports have been a must read for energy companies worldwide, as well as pro-active energy recruitment agencies and associations.

Hannah Peet, Managing Director at Energy Jobline says: "The report is growing and adapting each year, capturing more precise data and exploring crucial industry-impacting topics. There is no better time to get involved,"

- **What we learned in GETI 2018**

"GETI 2018 received 21,000 responses from global energy professionals of all levels of experience. The survey is also distributed by the world's top energy news websites and associations."

GETI 2018 revealed some "industry-shaking" statistics, such as:

- 45 per cent of Oil and Gas professionals reported being less content at work than in the three years prior.
- 42 per cent of Power professionals experienced a salary increase in 2017. A widely suspected to be due to the growing need for the power sector.
- 83 per cent of Renewables professionals are open to relocating to another region.
- 65 per cent of Nuclear professionals saw an ageing workforce as the biggest challenge facing their sector.

The Global Energy Talent Index 2019 survey closes on 24 September 2018. Winners of the BOSE Headphones and Apple Watches will be announced thereafter.

To complete the survey and be in with a chance of winning a prize of your choice, click [here](#) to be taken to the GETI survey.
