

Press Release

FOR IMMEDIATE RELEASE

Renewables in Africa (RiA) and International Society for Energy and Sustainability Research (ISESR) announce affiliate partnership

LONDON, UK – 24th July 2020

Build Back Better! As the conversation about reviving economies around in a post-COVID World focuses on a green recovery, one thing is certain: Africa would need to seriously address skills shortages within the clean energy sector to boost capacity building. Rather than candidates looking to enter the sector, it is the opportunity to build and nurture professional development and provide organisational growth that is in short supply.

Conscious of this challenge, Renewables in Africa and ISESR have decided to come together to promote knowledge enhancement opportunities for professionals, companies and government institutions and collaborate on projects.

As Africa Clean Energy Champion, Renewables in Africa is delighted to announce this affiliate partnership with International Society for Energy and Sustainability Research (ISESR). RiA's Chief Executive Officer, Tony Tiyou has this to say: *"We're regularly contacted by professionals, young and mature, desperately looking to either enter the market or retool to make sure they can stay relevant in today's market. In addition to that, COVID is disrupting old economies models and forcing people toward training opportunities in order for them to access opportunities. Through their certification programmes and workshops, ISESR is perfectly addressing this need".*

ISESR mission is to advance the field of Energy and Sustainability to inspire better living of humanity with a sustainable world by involving the industry experts and veterans from around the globe.

The partnership with RiA will allow the institution to better promote their training, workshops across the Africa Clean Energy Industry and also collaborate with an experienced engineering company. Echoing this point, Krishna Rubigha, India CEO and top executive of ISESR has this

to say: *“Tough times require smart moves. ISESr is glad to have Renewables in Africa as our affiliate partner whose sole mission is to bring power to Africa. COVID – 19 has given a compelling perspective to reiterate our stand towards fighting climate change. And that’s not one human, one organization work. Synergy is most important between organizations across globe to address the changing dynamics of working order of the world. ISESr joining hands with RiA will bring about a good impact towards that initiative.”*

RiA and ISESr are together stepping up efforts to make the green recovery a success. Sky is not the limit...it is the start.
